Hem Options

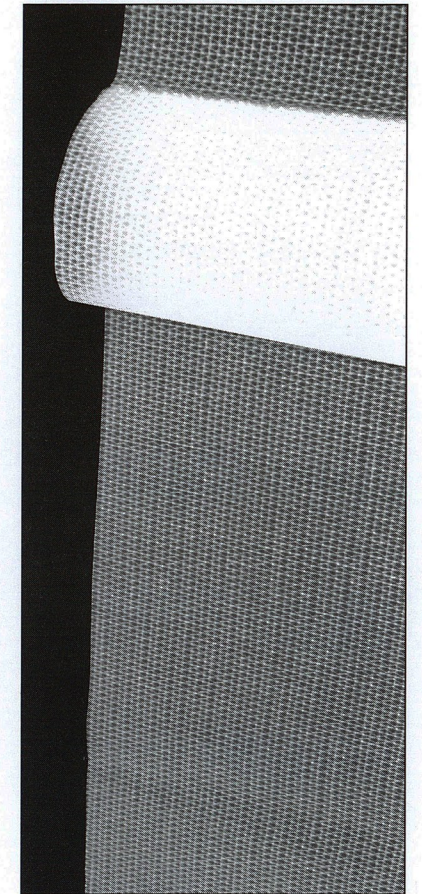

Top & Bottom Hem

Herculite uses a combination of RF welding and sewing in the production of our curtains. We use a mildew and UV resistant thread for optimal outdoor exposure. Our hems can be made in custom sizes ranging from 1 inch to 4 inches.

Pocket Hem

Herculite has designed a "floating" pocket hem for better wear and a longer life in the field. The floating pocket design isolates the wear and tear to the strongest point of the fabric. By using the mechanical bond of the stitch, the pocket hem is less likely to come apart compared to other designs.

Herculite has been supplying Agricultural Curtains for over 30 years. We are unique in the fact that we not only make the curtain, but we manufacture the fabric that is used in the curtain. This allows us to monitor the quality of your curtain from beginning to end, insuring the curtain's strength resistance to the extreme conditions found across North America. We are proud to say that our curtains are Made in America and we thank you for the opportunity to serve you.
